

Gold Series® serving BOSCH Manesty Tablet Coating Machines

Bosch Packaging Technology Limited Manesty

BOSCH Manesty is part of the German based international BOSCH Group and is one of the world's leading pharmaceutical equipment companies and has been supplying the highest quality tablet manufacturing equipment to the global pharmaceutical market for over 80 years. BOSCH Manesty has manufacturing facilities, offices and agents in Europe, Africa, Asia, The Pacific Rim, South America and North America.

BOSCH Manesty export a majority of their machines so therefore needed a dust collector supplier who could offer genuine global support. Historically they had found that some dust collector suppliers were difficult to work with, not being able to supply information for several days and deliveries often being late.

A large number of BOSCH Manesty's customers are pharmaceutical companies and issues such as ATEX and full containment of dust are of paramount importance. Therefore BOSCH Manesty needed a dust collector supplier who could offer these features with full technical backup.

When BOSCH Manesty saw the Gold Series® dust collector they realised that the high build quality, strength, and the very simple and extremely quick filter change, together with flexibility in terms of the position of doors, explosion venting panels etc, offered them something special they had not experienced before.

Once the quality of the Gold Series® dust collector was sold to BOSCH Manesty, the next stage was to prove to them that Camfil Farr APC could offer the global support, engineering and technical backup they needed along with the ability to meet deliveries.

Camfil Farr APC were able to do this and more, by offering very quick turnaround for quotations, technical questions and tailored drawings. Camfil Farr APC have also carried out two separate training presentations to BOSCH Manesty Engineers and sales people. These included a containment presentation by qualified Camfil Farr APC employees and more recently an ATEX presentation / training session.

The Camfil Farr APC Gold Series® dust collector offers BOSCH Manesty a fully compliant ATEX dust collector with full test data.

Product Information

Product:	Gold Series® dust collector
Size:	Four GS08's (two inside, two outside)
Air Volume:	6,500 m ³ /hr normal operating
Application:	Extraction from a XL350 tablet coating machine
Customer:	BOSCH Manesty (installed in Zaragoza, Spain)
Installation date:	January 2010

Quotes

Ian Harrop of BOSCH Manesty, Head of Sales Product Engineering, said: "We chose Camfil Farr APC and continue to have a very good and close relationship because the equipment is extremely robust, is flexible in terms of size and specification, including safe change containment options. Camfil Farr APC has a worldwide presence and support and is recognised as a quality dust collector manufacturer, which is extremely important to BOSCH Manesty and its customers."
